

Employee Attendance Management System

Overview

The Employee Attendance Management System is a web-based application developed to improve the efficiency, accuracy, and reliability of employee attendance tracking at Universiti Malaysia Terengganu (UMT). The existing punch card system has several limitations, including manual data entry, lack of real-time monitoring, and vulnerability to record manipulation, which can lead to inaccurate attendance data and reduced organizational trust.

To address these issues, this system introduces a centralized digital solution that automates attendance tracking. Employees can securely clock in and out through an online platform, while HR personnel and administrators are able to monitor attendance records in real time. This reduces human errors, improves transparency, and ensures data integrity.

The system is designed using the Model-View-Controller (MVC) architecture with an open layered structure, ensuring modularity and maintainability. It supports key functionalities such as attendance management, leave applications, overtime requests, and report generation. By replacing manual processes with an automated system, the project enhances productivity, streamlines administrative tasks, and enables data-driven decision making.

Tech Stack

- Java (Servlet, JSP)
- MySQL
- Apache Tomcat 9
- HTML, CSS

Features

- **User Profile Management**

Users (Supporting Staff and Academicians) can log in to view and update their

personal information. The system validates input data and ensures successful updates with proper notifications.

- **Attendance Management**

Employees can record, edit, and manage their attendance (clock-in/clock-out). The system validates entries, generates summaries, and flags irregularities for review by HRD or Head of PTJ.

- **Disciplinary Notice System**

The system automatically detects attendance issues and notifies HRD. HR personnel can review records, generate disciplinary notices, and maintain a history of issued notices.

- **Overtime Management**

Employees can submit overtime requests, which are reviewed by HRD. The system updates records, tracks approvals/rejections, and generates reports for monitoring overtime activities.

- **Leave Management**

Employees can apply for leave by submitting required details. HRD can approve or reject requests, and approved leaves are automatically reflected in attendance records.

- **Department Attendance Control**

The Head of PTJ can manage and finalize attendance records for their department. Once validated, the system generates summaries and notifies relevant stakeholders.

Non-Functional Requirements

- **Performance**

The system is designed to handle multiple concurrent users efficiently. Attendance records are processed in real time, with responses (confirmation or error) delivered within a short time frame to ensure smooth user experience.

- **Security**

Sensitive employee data is protected using standard security practices, including secure data transmission and storage mechanisms to prevent unauthorized access.

- **Usability**

The system provides a user-friendly interface that follows a simple navigation flow, allowing users to perform tasks (such as attendance recording) with minimal steps and without extensive training.

- **Compatibility**

The application is accessible across multiple devices and platforms, including desktops, laptops, and mobile devices, and supports modern web browsers.

- **Maintainability**

The system follows a modular architecture (MVC and layered design), making it easier to debug, maintain, and extend with future enhancements.

How to Run

1. Requirements

- Apache Tomcat 9
 - MySQL
 - NetBeans IDE (recommended)
-

2. Database Setup

1. Create a database:
attendancesystem1_db
 2. Import the SQL file:
database/attendancesystem1_db.sql
 3. Configure database connection (if needed):
 - Update your DB credentials in the Java connection file (e.g., DBConnection.java)
-

3. Run the Project

1. Open the project in NetBeans
 2. Right-click the project → **Run**
 3. The application will be deployed on Tomcat
 4. Access the system:
<http://localhost:8080/testLogin>
-

Screenshots

3.5 User Interface Design

3.4.1 Login Interface

The Login Page features a clean, minimalist design. At the top, the title "Login Page" is displayed in a bold, blue font. Below the title, there are two input fields: "Username:" and "Password:". The "Username:" field is a simple white rectangle with a thin border. The "Password:" field is a white rectangle with a thin border and a small eye icon on the right side to toggle visibility. Below these fields is a prominent blue button with the text "Login" in white. At the bottom, there is a link that says "Don't have an account? [Register here.](#)" in a smaller, blue font.

Figure 16 : Login Page

The Register User Page has a structured layout with a title "Register" in a bold, blue font at the top. The form consists of several input fields and dropdown menus. The "Username:" field is a white rectangle with a thin border, containing the text "jaya". The "Full Name:" field is a white rectangle with a thin border. The "Gender:" field is a dropdown menu with the text "-- Select Gender --". The "Date of Birth:" field is a white rectangle with a thin border, containing the text "dd/mm/yyyy" and a calendar icon on the right. The "Email:" field is a white rectangle with a thin border. The "Phone Number:" field is a white rectangle with a thin border. The "Address:" field is a white rectangle with a thin border and a small icon on the right. The "Department:" field is a white rectangle with a thin border. The "Role:" field is a dropdown menu with the text "-- Select Role --". The "Password:" field is a white rectangle with a thin border, containing four dots. Below these fields is a prominent blue button with the text "Register" in white.

4.3 Manage Attendance

4.3.1 HRD

The screenshot displays the 'Manage Attendance' interface within the HRD Panel. It features a search bar at the top with the placeholder text 'Search by Name or Date' and a blue 'Search' button. Below the search bar is a table with the following columns: ID, Name, Date, Clock In, Clock Out, Status, and Action. The table contains 15 rows of attendance records. Each row has a green 'Update' button and a red 'Delete' button in the Action column. The table is scrollable, as indicated by the scrollbar on the right side.
